

the
deep access
roadmap

crombie, lenoir, badii & ioannidis

This document is intended to provide the basis for moving from accessibility to wider notions of adaptivity. As such, it aims to provide a coherent basis for the research and development of key strategic areas. The roadmap offers an overview of work in this area and moves on to define four key areas for further research, namely:

adaptive architectures

adaptive content processing

adaptive interface design

adaptive localities

the deep access roadmap
